

Hello from Team Rillet!

We truly value the effort candidates put into getting to know us and sharing their experiences. To help you feel confident and informed throughout the process, we've created this guide to give you a clearer picture of what to expect — from the people you'll meet to the types of conversations we'll have. Our goal is to make the experience as transparent, welcoming, and engaging as possible. We're at a trajectory-defining moment for our company—a time of pivotal growth, fresh opportunities, and exciting challenges.

Interview Process Overview:

Our interview process is designed to be practical, allowing us to understand your work style and for you to gain insight into ours. We understand that everyone comes from different environments, but an openness and desire to learn is a must. Due to current team capacity, individual interviews may be staggered. Please inform your recruiter if you have any questions or urgent deadlines.

Depending on the role you're interviewing for, the general interview modules will remain largely consistent, with the exception of one or two specialized modules. However, the questions within each module will be tailored to the specific role and its requirements. Your recruiter will communicate which interviews to expect in the availability request emails.

How we work:

- [Trunk Based Development](#)
- [Test Driven Development](#)
- [Pair Programming](#)
- [Onion Architecture & Domain Driven Design](#)

What we work with:

- **Frontend:** Typescript, SvelteJS, SvelteKit, Tailwindcss
- **Backend:** Kotlin, Spring boot
- **Infra:** AWS, Postgres, Pulumi
- **ML/AI:** Python

Initial Technical Interview Deep Dive (60 Minutes)

This one-hour interview will be a conversational discussion about a project you owned that's relevant to the role you're interviewing for, focusing on the technical decisions you made and problems you solved. Be ready to explain your system architecture, code structure, deployment

process, testing, performance handling, monitoring, and team workflow—emphasizing why you chose each approach and what trade-offs existed. We want to see that you can identify both successes and failures in your work, understand the reasoning behind decisions, and demonstrate how you learn from experience. Think about what worked and what didn't, and be honest rather than trying to seem perfect. Communicate clearly and show critical thinking about your technical work—this is a conversation, not a formal presentation.

Pair Programming Interview (90 Minutes)

This live, [pair-programming interview](#) simulates our team's collaborative workflow. You will join a video call with our engineers, share your screen, and write code together. In this challenge, we are looking for more than just a minimal, bare-bones solution. We want to see:

- **Creativity and Initiative:** Go beyond the basic requirements and add features or improvements that you think would enhance the solution.
- **Attention to Detail:** Ensure your code is clean, maintainable, and well-documented.
- **Best Practices:** Follow coding standards and best practices throughout your implementation.
- **Robustness:** Implement comprehensive tests and handle edge cases effectively.
 - **Important things to note:**
 - The interview supports **Kotlin, Java, Typescript, or Python**.
 - [You should also be prepared to use Test Driven Development \(TDD\)](#).
 - **Using AI In Interviews:**
 - **Allowed:** Using AI for specific questions, such as syntax lookups or clarification on minor details.
 - **Not Allowed:** Using AI to solve the core problem for you, or utilizing AI tab completion features.

Please be on the lookout for a setup email 48 hours before your interview.

There will be setup instructions for before the interview (file:readme.md) and context on the problem (file:[challenge.md](#)).

if you do not receive this email, contact your recruiter ASAP. 

System Design Interview (45 Minutes):

This practical interview assesses your approach to system design and architecture, typically in a system similar to our own (read more on [Hexagonal Architecture and Domain Driven Design](#)). We want to see how you interpret a problem, discuss justifications and tradeoffs with our team,

and demonstrate your technical knowledge. The interview will be conducted using [Miro](#), and this [article](#) may be helpful.

Meeting with Engineering Leader (45 Minutes)

This conversation focuses on understanding your career journey, including the experiences and decisions that have shaped your professional path. We'll explore what motivates you in your work, what you're looking for in your next role, and how your career goals align with potential opportunities on our team. This is also an opportunity for you to learn about our engineering organization, leadership philosophy, and team culture.

Meeting with Founders (CEO / CTO)

As an early-stage startup, you would be joining at an exciting time but it's also a time where every single hire we make can influence both the culture and trajectory of the company, this will be a bi-directional conversations as we want to be excited about each hire we make, but we also want you to be excited to be here - bring your thoughtful questions for the team!

- **Meeting with CEO / Founder (15 Minutes)**
- **Meeting with CTO / Founder (30 Minutes)**

References & Offer Stage:

- We want to hear directly from people who have had the opportunity to work directly with you! Ideally this is a recent manager and / or peer who can speak directly to your work. Our offers will be contingent upon a successful reference check.
